

Press release

Evira strengthens its commitment to childhood obesity treatment through the acquisition of For Life Academy

Evira acquires For Life Academy (FLA) and will integrate its operations to continue offering an effective combination of digital and in-person treatment for childhood obesity.

Through this acquisition, Evira strengthens its long-term commitment to developing evidence-based treatment for childhood obesity, while ensuring that the valuable work of FLA lives on.

Evira is currently used in five countries and has been evaluated in multiple scientific studies and clinical follow-ups involving over 4,500 patients. Results show that treatment with Evira is twice as effective as conventional standard care for childhood obesity. To date, more than 1 million measurements have been conducted, and patients have contributed over 7,000 treatment years.

“We are happy that For Life Academy will continue its mission through Evira. It feels reassuring to know that FLA is in the hands of an organization that shares our dedication to this patient group.”

- Mahnoush Etminan, former CEO of FLA, and Annelie Thorén, pediatrician.

“We look forward to building on the knowledge that FLA has developed, and to continue improving treatment for children and adolescents living with obesity.”

- Love Marcus, CEO of Evira.
